

CONTENTS

Foreword	v
Preface	vii
Fluid mechanics of ciliary propulsion	1
<i>John Blake</i>	
The role of cyclic nucleotide pathways and calmodulin in ciliary stimulation	53
<i>Alex Braiman, Natalya Uzlaner, and Zvi Priel</i>	
A numerical method for simulating fast-swimming motions	65
<i>Ricardo Cortez</i>	
A fluid–structure interaction model of ciliary beating	71
<i>Robert H. Dillon and Lisa J. Fauci</i>	
Energetic considerations of ciliary beating	81
<i>Shay Gueron and Konstantin Levit-Gurevich</i>	
Fluid dynamics of animal appendages that capture molecules: Arthropod olfactory antennae	97
<i>M.A.R. Koehl</i>	
Cartesian grid methods for fluid flow in complex geometries	117
<i>Randall J. LeVeque and Donna Calhoun</i>	
Computed simulations of ciliary and flagellar motility using the geometric clutch model can replicate a wide variety of experimental conditions	145
<i>Charles B. Lindemann</i>	
A one-dimensional fluid dynamic model of the systemic arteries	167
<i>Mette S. Olufsen</i>	

Hydrodynamics of liquid capsules enclosed by elastic membranes	189
<i>C. Pozrikidis</i>	
Unsteady aerodynamics of two dimensional insect flight	223
<i>Z. Jane Wang</i>	
List of workshop participants	237
