

CONTENTS

Foreword	ix
Preface	xi
Introduction to Invariant Theory in Superalgebras	1
<i>Gian-Carlo Rota and Bernd Sturmfels</i>	
Implementation of the Straightening Algorithm of Classical Invariant Theory	36
<i>Neil White</i>	
Canonical Forms of Binary Forms: Variations on a Theme of Sylvester	46
<i>Joseph P.S. Kung</i>	
Invariant Theory, Equivalence Problems, and the Calculus of Variations	59
<i>Peter J. Olver</i>	
A Survey of Invariant Theory Applied to Normal Forms of Vectorfields with Nilpotent Linear Part	82
<i>R. Cushman and J.A. Sanders</i>	
Operators Commuting with Coxeter Group Actions on Polynomials	107
<i>Charles F. Dunkl</i>	
The Möbius Function of Subword Order	118
<i>Anders Björner</i>	
Keys & Standard Bases	125
<i>Alain Lascoux and Marcel-Paul Schützenberger</i>	
Variations on Differential Posets	145
<i>Richard P. Stanley</i>	
Idempotents for the Free Lie Algebra and q -Enumeration	166
<i>F. Bergeron, N. Bergeron & A.M. Garsia</i>	
Tableaux in the Representation Theory of the Classical Lie Groups	191
<i>Sheila Sundaram</i>	
S -Functions and Characters of Lie Algebras and Superalgebras	226
<i>Ronald C. King</i>	
The Ubiquitous Young Tableau	262
<i>Bruce E. Sagan</i>
