Preface	xiii

SEMICONDUCTORS, PART I

Process Modeling

IC technology CAD overview	1
<i>P. Lloyd</i>	
The Boltzmann–Poisson system in weakly collisional sheaths	17
<i>S. Hamaguchi, R.T. Farouki, and M. Dalvie</i>	
An interface method for semiconductor process simulation	33
<i>M.J. Johnson and Carl L. Gardner</i>	
Asymptotic analysis of a model for the diffusion of dopant-defect pairs	49
<i>J.R. King</i>	
A reaction-diffusion system modeling phosphorus diffusion	67
<i>Walter B. Richardson, Jr.</i>	
Atomic diffusion in <i>GaAs</i> with controlled deviation from stoichiometry	79
<i>Ken Suto and Jun-Ichi Nishizawa</i>	

Circuit Simulation

Theory of a stochastic algorithm for capacitance extraction in integrated circuits	107
<i>Yannick L. Le Coz and Ralph B. Iverson</i>	
Moment-matching approximations for linear(ized) circuit analysis	115
<i>Nanda Gopal, Ashok Balivada, and Lawrence T. Pillage</i>	
Spectral algorithm for simulation of integrated circuits	131
<i>O.A. Palusinski, F. Szidarovszky, C. Marcjan, and M. Abdennadher</i>	
Convergence of waveform relaxation for RC circuits	141
<i>Albert E. Ruehli and Charles A. Zukowski</i>	
Switched networks	147
<i>Vlach and D. Bedrosian</i>
