

CONTENTS

Foreword	ix
Preface	xi
Mathematical problems in the kinetic theory of polymeric fluids	1
<i>R. Bird</i>	
Lagrangian concepts for the numerical analysis of viscoelastic flow	21
<i>B. Caswell</i>	
Solutions with shocks for conservation laws with memory	33
<i>C. Dafermos</i>	
Hyperbolic dynamics in the flow of elastic liquids	57
<i>D.D. Joseph</i>	
Rubbery liquids in theory and experiment	
<i>E.A. Kearsley</i>	
Dynamical behavior under random perturbation of materials with selective recall	123
<i>M. Marcus and V.J. Mizel</i>	
Development of singularities in nonlinear viscoelasticity	139
<i>J.A. Nohel and M.J. Renardy</i>	
Macromolecules in elongational flows: metastability and hysteresis	153
<i>Y. Rabin</i>	
Propagation of discontinuities in linear viscoelasticity	161
<i>M.J. Renardy and W. Hrusa</i>	
Strength and entanglement development at amorphous polymer interfaces	169
<i>R.P. Wool</i>	
Author index for volumes 1 through 6	189
Information about other volumes in this program	197
