

CONTENTS

Foreword	v
Preface	vii
Random porous media flow on large 3-D grids: Numerics, performance, and application to homogenization	1
<i>Rachid Ababou</i>	
Modeling transport phenomena in porous media	27
<i>Jacob Bear</i>	
Modelling of compositional flow in naturally fractured reservoirs	65
<i>Zhangxin Chen and Jim Douglas, Jr.</i>	
A particle-grid air quality modeling approach	97
<i>David P. Chock and Sandra L. Winkler</i>	
On the equilibrium equations of poro-elasticity	133
<i>Kenneth R. Driessel</i>	
Eulerian-Lagrangian localized adjoint methods for reactive transport in groundwater	149
<i>Richard E. Ewing and Hong Wang</i>	
Stochastic modeling of rainfall	171
<i>Peter Guttorp</i>	
Incorporating model uncertainty into spatial predictions	189
<i>Mark S. Handcock</i>	
Models for flow and transport through porous Media derived by homogenization	201
<i>Ulrich Hornung</i>	
Global surface temperature changes since the 1850s	223
<i>P.D. Jones</i>	
A multicomponent self-similar characterization of rainfall fluctuations	239
<i>Praveen Kumar and Efi Foufoula-Georgiou</i>	

Estimation of kinetic rate coefficients for 2,4-D biodegradation during transport in soil columns	255
<i>R.S. Maier, W.J. Maier, B. Mohammadi, R. Estrella, M.L. Brusseau, and R.M. Miller</i>	
Modeling in nuclear waste isolation: Approximate solutions for flow in unsaturated porous media	275
<i>Mario J. Martinez and David F. McTigue</i>	
Similarity solutions for gravity-dominated spreading of a lens of organic contaminant	291
<i>Clarence A. Miller and Cornelis J. Van Duijn</i>	
Application of optimal data assimilation techniques in oceanography	305
<i>Robert N. Miller</i>	
Mathematical physics of infiltration on flat and sloping topography	327
<i>J.R. Philip</i>	
A note concerning multivariate total positivity on the simplex	351
<i>William S. Rayens</i>	
Spatial analysis for environmental studies	359
<i>H. Jean Thiébaux</i>	
On diagonalization of coupled hydrologic transport and geochemical reaction equations	373
<i>Gour-Tsyh Yeh and Hwai-Ping Cheng</i>
