

CONTENTS

Foreword	v
Preface	vii

I. BIOMOLECULAR TOPOLOGY

Tangle complexity and the topology of the chinese rings	1
<i>Louis H. Kauffman</i>	
Lattice invariants for knots	11
<i>E.J. Janse van Rensburg</i>	
Topology and geometry of biopolymers	21
<i>E.J. Janse van Rensburg, Enzo Orlandini, De Witt Sumners, M. Carla Tesi, and Stuart G. Whittington</i>	
Energy functions for knots: beginning to predict physical behavior	39
<i>Jonathan Simon</i>	

II. BIOMOLECULAR STRUCTURE AND DYNAMICS: THEORY

The elastic rod provides a model for DNA and its functions	59
<i>John E. Hearst and Yaoming Shi</i>	
Hamiltonian formulations and symmetries in rod mechanics	71
<i>Donald J. Dichmann, Yiwei Li, and John H. Maddocks</i>	
Statistical mechanics of supercoiled DNA	115
<i>John F. Marko and Eric. D. Siggia</i>	
Determination of the DNA helical repeat and of the structure of supercoiled DNA by cryo-electron microscopy	117
<i>Andrzej Stasiak, Jan Bednar, Patrick Furrer, Vsevolod Katritch, and Jacques Dubochet</i>	
Dynamics of twist and writhe and the modeling of bacterial fibers	139
<i>Michael Tabor and Isaac Klapper</i>	

III. BIOMOLECULAR STRUCTURE AND DYNAMICS: COMPUTATION

Integration methods for molecular dynamics	161
<i>Benedict J. Leimkuhler, Sebastian Reich, and Robert D. Skeel</i>	
On the parallelization of CHARMM on the CM-5/5E	187
<i>Jill P. Mesirov, Pablo Tamayo, and Robert J. Nagle</i>	
Computational studies of spatially constrained DNA	195
<i>Wilma K. Olson, Timothy P. Westcott, Jennifer A. Martino, and Guo-Hua Liu</i>	
Pursuing Laplace's vision on modern computers	219
<i>Tamar Schlick</i>
