October 15–19, 2018

COIN fORgery: Developing Open Source Tools for Operations Research

ORGANIZERS
Matthias Koeppe, University of California, Davis
Andrew Mason, University of Auckland
Giacomo Nannicini, IBM
Ted Ralphs, Lehigh University
Matthew Saltzman, Clemson University
John Siirola, Sandia National Laboratories
Jean-Paul Watson, Sandia National Laboratories

DESCRIPTION
The focus of this workshop is on the development of tools in the COIN-OR (www.coin-or.org) repository of open source software for operations research. The goal is to bring together the community of existing and future developers, users, packagers, and other interested parties for a combination of tutorials, technical talks, and hands-on sessions leading to proposals for coding sprints to be held later in the year. A running theme will be the future of COIN-OR and how to put it on a track for future sustainability.

WORKSHOP STRUCTURE
The general structure of the workshop will be tutorials and/or technical talks in the morning, optional topical discussion at lunch for those who are interested, and hands-on breakout sessions in the afternoon. Each day will have a theme and be led by a different member of the COIN-OR community.
