Workshop

APRIL 29 - MAY 3, 2019

Mathematics in Optical Imaging

Optical imaging encompasses a variety of imaging techniques that rely on illumination light in the ultra-violet, visible and infrared regions of the electromagnetic spectrum. Compared with other imaging methods, optical recording offers several attractions including simplicity, low cost and portability. These advantages make optical imaging techniques extremely useful and accessible in many areas of studies, such as cancer detection in medical imaging, cognitive and language development of infants, and remote sensing in atmospheric and oceanic science. There have been some exciting advancements in optical imaging in the recent decade, and one of them is the combination of optical imaging with other imaging modalities, known as the hybrid method. This method allows different modalities to compensate and complement the stability and accuracy of each other, increasing the detecting/diagnostic value.

ORGANIZERS

Ru-yu Lai, University of Minnesota

Qin Li, University of Wisconsin, Madison

Gunther Uhlmann, University of Washington and Hong Kong University of Science and Technology

SPEAKERS

Mark Anastasio, Washington University

Simon Arridge, University College London

Gang Bao, Zhejiang University

Eric Bonnetier, Université Grenoble-Alpes

Guanghong Chen, University of Wisconsin Medical School

Yingda Cheng, Michigan State University

Francis Chung, University of Kentucky

Irene Gamba, The University of Texas at Austin

Prakash Kara, University of Minnesota

Francois Monard, University of California, Santa Cruz

Shari Moskow, Drexel University

Benjamin Palacios, University of Chicago

Paolo Provenzano, University of Minnesota

Kui Ren, Columbia University

John Schotland, University of Michigan

Plamen Stefanov, Purdue University

Weiran Sun, Simon Fraser University

Fauzi Triki, Université Grenoble-Alpes

Yiran Wang, Stanford University

Chris Xu, Cornell University

Yang Yang, Michigan State University

COLLEGE OF
Science & Engineering

UNIVERSITY OF MINNESOTA
